J. C. Rox, for Director of Agriculture, Bengal,

DEPARTMENT OF ACRICULTURE, BENCAL.

Third and Final Forecast of the Spring Oilseed Crops of Bengal, 1928-29.

[Note.—On an average of the five years ending 1926-27 the area under linseed in Bengal has represented some 3.3 per cent. and that under rape and mustard 11.6 per cent. of the total area under these crops in British India.]

Character of the Season,—At the beginning of the season the weather was generally favourable for field operation. During the early period of the growth, the crops flourished well but subsequently prolonged drought affected the outturn, especially in the high land tracts of West Bengal. Rainfall in the latter part of January somewhat improved the prospects of the late crops. On the whole, a satisfactory crop was reaped for the province.

Acreage.—Oilseeds are principally grown in the Rajshahi, Dacca, and Presidency Divisions. In the other two divisions the cultivation is small. The total area under these crops (excepting sesamum, for which separate forecasts are issued) is estimated at 884,300 acres this year as against 900,600 acres last year.

Outturn.—From the District Officers' estimates the provincial outturn of the different oilseed crops works out at 79 per cent. of the normal as against 69 per cent. last year.

Taking 53 maunds as the normal rate of yield per acre for linseed, 6 maunds for rape and mustard and 41 maunds for other oilseeds, the total yield of the crops for the province is estimated at 149,400 tons this year as against 133,500 tons or about 12 per cent. greater than last year.

G. P. HECTOR,

Director of Agriculture, Bengal (offg.).

DACCA, the 10th May 1929.

DEPARTMENT OF ACRICULTURE, BENGAL.

Final Forecast of the Wheat Crop of Bengal, 1928-29.

[Note.—On an average of the five years ending 1926-27, the area under wheat in Bengal has represented some 0.4 per cent. of the total area under wheat in India. The ratio of the irrigated wheat acreage to total wheat acreage in (a) British India and (b) in the territory now reported on has, in the five years ending 1926-27, averaged (a) 38.5 and (b) 14.0 per cent., respectively.]

Character of the Season.—At the outset the weather was generally favourable for field operations. During the early period of growth the crop thrived well, but drought later on affected the growth in the high land tracts. The rainfall in the latter part of January somewhat improved prospects. Some injury was caused in places by hail and rain at the time of harvest. On the whole, a better crop was reaped than last year.

Acreage.—According to the estimates of District Officers, the total area sown is 122,900 acres this year as against 106,600 acres last year.

Outturn.—The provincial outturn as worked out from the district estimates is 80 per cent. of the normal as against 64 per cent. last year. Taking the normal yield to be 8\frac{3}{4} maunds per acre, the gross yield of the crop for the province is estimated at 31,600 tons this year as against 21,900 tons or about 44 per cent. higher than last year.

At the end of April the average wholesale price of wheat at the principal marts of the province was Rs. 6-15-4 per maund or about 6 and 10 per cent. higher than the prices ruling at the corresponding periods of last year and the year preceding, respectively. The average wholesale price of common rice at the principal marts, on the other hand, was Rs. 6-4-9 per maund or about 14 and 12 per cent. lower than the prices ruling at the corresponding periods of last year and the year preceding, respectively.

DISTRICT REPORTS ON WEATHER AND CROPS.

For the week ending on the 15th May 1929.

Summary.—Rainfall was almost general throughout the Province. Sowings of autumn crops in West Bengal and weeding in East and North Bengal are proceeding. The standing crops are progressing well. The average price of common rice for the province has remained practically stationary as compared with that of the previous week.
